Average Age of Death--1973

	<u>Males</u>	<u>Females</u>
Canada	63.6	69.1
Canadian Indians	41.5	43.3
Alberta	63.4	67.5
Alberta Indians	39.7	37.4

Information derived from Statistics Canada and the Medical Services Branch).

Accidental and Violent Deaths Among Alberta Indians--1977

Accidents and violence accounted for 69 male and 30 female deaths representing 37.4% of all deaths amongst Registered Indians. Many of these deaths were alcohol-related, could have been prevented and are useless deaths. Violent death accounts for most deaths in 1-49 age group.

56 out of every 100 deaths in pre-school children (1-4 years) are due to accidents and violence.

66 out of every 100 deaths in school children (5-14 years) are due to accidents and violence.

77 out of 100 deaths in young adults (15-29 years) are due to accidents and violence."

Excerpt from a memorandum of April 12, 1978 from Dr. J. Kirkbride, Regional Director, Alberta Region, Medical Services Branch, to All Alberta Chiefs)

Poor Health and the Bad Socio-economic Effects

The Canadian Medical Association estimates that the poorest 20% of the population suffers about 75% to 85% of the major illnesses. But not only do the poor get sick more often, they also take longer to recover, seek and receive less dental, medical and hospital treatment, and suffer more severe after-effects than do people with more income. Being sick more often and for longer (periods), the lose wages and employment, and have greater difficulty in holding steady jobs."

Country	1935	1940
Canada	7.2	7.2
United States	4.2	4.2
France	3.2	3.2
Germany	2.2	2.2

1940-1941: The first year of the war, the United States and Canada were the only countries to remain neutral.

1941-1942: The second year of the war, the United States and Canada were the only countries to remain neutral.
